Flexographic Printing Sleeves

Our Tint Sleeves produce consistent results!

Tint sleeves are precision ground elastomeric tubing which are typically slid over an air assist tint mandrel for flexographic coating applications. Once applied to the tint mandrel, the sleeve is held in place using a locking collar on each end to prevent lateral sleeve movement.

Applications

Flexo printers use a tint kit setup to apply continuous overprint varnishes, inks adhesives and specialty coatings that can be UV or air cured for a variety of functional converting applications.

Advantages

- High-quality materials to ensure durability, consistency and dimensional stability
- Increases productivity - designed for high-speed printing
- Offered in a variety of compounds and thickness to meet demanding applications
- Reduces press downtime - saving time and energy

Specifications

Tint sleeves are offered in a variety of widths, compounds and thicknesses. Our sizes vary from .985" ID to 6.047" OD and widths up to 36".

NOTE: Optional tint sleeve cutters are also available.

Competitive pricing

All popular sizes are in stock for shipping next business day. Call us today!
